

Industrial Machinery Backup Generators

6 x 22 kVA Generators for Industrial Machinery Standby Power

ADE Power were contacted by a regular client, a global manufacturer of industrial waste management equipment, who were in need of 6 x 22 kVA industrial 3 phase generators to supply alongside their products - ensuring dependable emergency standby power for the machines in the event of a mains power failure.

ADE Power have been supplying reliable low-kVA standby power solutions for our client's products for over 6 years now. In recent years, they decided to switch from standard-range Cummins generators to new Cummins Q Range gensets due to their more compact footprint and lighter weight with no impact on performance or noise levels.

As a result, for this order they chose 6 Cummins C22D5Q's - a tried and tested diesel generator at the 20 kVA size point.

This 132 kVA batch of generators takes ADE Power's total supplied to this client over 500 kVA, highlighting the importance of a strong supply chain partnership for applications where reliable and dependable standby power is critical.

Products:

- 6 x Cummins C22D5Q

Industries:

- Manufacturing
- Waste Management
